1. Executive Summary

During 2019-20, the focus under the Power Grid Corporation of India-ICRISAT's initiative has been on water conservation to enhance availability and rainwater use efficiency especially in small farm ponds as a drought proofing strategy. During this period, 85 farm ponds with cement lining were constructed to provide easy and quick access to water by the smallholders. To harness rainwater run-off, 2 check dams and 5 loose boulder structures were constructed. To strengthen boundaries of 4 big community ponds constructed earlier, planting of 30,000 *Gliricidia* plants was undertaken on the boundaries of ponds and farm bunds. Synthesis of data on participatory trials during post-rainy season 2018-19, rainy season 2019 and post-rainy season 2019-20 showed a yield benefit of 10-50% with soil test-based addition of micro and secondary nutrients, use of improved varieties and humic acid application. To improve household nutrition and incomes, women farmers were supported in planting more than 400 kitchen gardens during rainy season 2019 and around 250 during post-rainy season 2019-20. To strengthen livestock-based livelihoods, around 10 women were organized into a Self-Help Group (SHG) which was provided technical and financial assistance to strengthen livestock-based activities. In order to make the initiative sustainable in the long run, capacity building has been at the core of the watershed interventions through formal/informal trainings and field days.

2. Background

Under its Corporate Social Responsibility, Power Grid Corporation of India Limited supported the International Crops Research Institute for the Semi-Arid Tropics (ICRISAT) in developing a scalable site of learning to improve livelihoods and build resilience through integrated watershed management in Kurnool district of Andhra Pradesh.

The watershed is located in Bethamcherla mandal of Kurnool district and comprises of 10 villages/hamlets, namely Pendekal, Marrikunta, Venkatagiri, Repalli (Pendekal revenue village); Muddavaram, Musalaicheruvu, Veerayapalli (Muddavaram revenue village); Mandalavaripalli (Emboy revenue village) and Bugganipalli and G Tanda (Bugganipalli revenue village). The watershed is home to around 20,000 people. Its 4100 households comprise of 71% small farmers (71%), medium farmers (20%) and large farmers (9%). Average annual rainfall in the watershed area is about 675 mm. Of a geographical area of about 6500 ha, around 3000 ha is under cultivation. The major crops grown in the watershed villages are maize, groundnut, pigeonpea and sorghum with low crop productivity.

Between April 2019 and February 2020, the watershed activities undertaken centered around soil and water conservation (farm ponds, check dams, loose boulder structures); productivity enhancement initiatives like soil test-based fertilizer application, improved crop varieties; kitchen gardens; supporting women SHGs in livestock-based activities; biomass generation for recycling and soil health through *Gliricidia* plantations and capacity building of farmers and stakeholders.

3. Soil and Water Conservation

In view of water scarcity and frequent droughts, finding ways to increase water availability, both blue water (in water harvesting structures) and green water (stored in the soil matrix), is key to intensifying agricultural production in the region. In this context, the major focus was on water conservation to enhance water availability and rainwater use efficiency. These soil and water conservation structures have created a net storage capacity of more than 200,000 m³. Several of the borewells and open wells that were dead have become functional. This activity has significantly increased irrigated area by 15-25% and thereby crop yields.

3.1. Farm ponds

Small farm ponds (~10 m x 10 m x 2.5 m) were scaled up as a drought proofing strategy at farm level (Tables 1a and b; Figures 1 and 2). A total of 85 new farm ponds were constructed during the reporting period. Constructing low-cost farm ponds has proven to be a suitable water storage solution to help mitigate drought-related losses by up to 30-60%.

During rainy season 2019 and postrainy season 2019-20, more than 50 farmers planted vegetable seeds around the farm in order to use available water to produce vegetables for domestic consumption. Increased water availability was instrumental in allowing farmers to diversify production to vegetables and set up fruit plantations.

3.2. Check dams

During April 2019 – Feb 2020, two check dams were constructed to conserve rainwater runoff (Table 2; Figure 3).

4.2.3. Aquasap demonstrations

Aquasap is a 100% organic extract/fertilizer from sea weeds and is used as foliar application on crops. It contains macro and micro nutrients, essential amino acids and plant growth hormones that boost crop yields by accelerating metabolic function and enhancing nutrition uptake capacity. During rainy season 2019, 18 on-farm participatory demonstrations/trials were conducted on foliar application of aquasap on groundnut and pigeonpea. Data showed an increase in yield by 5-11% over the non-application of aquasap (Table 9).

4.3. Rabi 2019-20

4.3.1. Soil test-based use of deficient micro and secondary nutrients

During rabi 2019-20, around 40 farmers were provided with deficient micro/secondary nutrients (See Annexure 5 for farmer wise detail of micro/secondary nutrient fertilizer distribution). On-farm participatory trials showed a yield increase of 5-9% (Table 10).

5. Intensification of Vegetable Crops

5.1. Rainy season 2019

For mainstream women farmers, small kitchen gardens or vegetable gardens were promoted. More than 400 women farmers were given vegetable kits containing ~50-100 g of seeds of brinjal, tomato, okra, bitter gourd, ridge gourd, bottle gourd and spinach to grow for household consumption and sale (Table 12).

6. Biomass Generation and Soil-Carbon Building

With the objective of biomass generation and strengthening of boundaries of community ponds, around 30,000 Gliricidia plants were planted.

7. Strengthening Livelihood Activities

During April-December 2019, self-help group Sri Lakshmi Narasimha was supported with a ₹ 30,000 revolving fund to strengthen livestock-based (sheep/goat) enterprises.

8. Impact Assessment Video recording of interventions

An impact assessment study was undertaken during the month of Feb 2020. Data is being analysed and a separate detailed report will be submitted.

In order to capture the success story of Kurnool watershed, a video recording was done following visits during April 2019-May 2020 (Figure 6). A CD has been prepared for sharing with stakeholders.

Figure 6. (L) Capturing sound bytes from Mr Raju, General Manager, PowerGrid, Kurnool and (R) field interventions being recorded on video.

9. Capacity Building Activities

In order to make the initiative sustainable in the long run, capacity building through formal/informal trainings and field days is at the core of the watershed interventions. Regular formal/informal meetings/trainings by 2 ICRISAT field staff and 2 NGO staff with technical support from a team of scientists at ICRISAT headquarters were part of the watershed program to enable proper implementation of technologies.

We believe all **people** have a **right** to **nutritious food** and a **better livelihood**.

ICRISAT works in agricultural research for development across the drylands of Africa and Asia, making farming profitable for smallholder farmers while reducing malnutrition and environmental degradation.

We work across the entire value chain from developing new varieties to agri-business and linking farmers to markets.
